Art Unit: 1775

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11 includes other components for the fiber yet claim 1 limits the fiber to carbon rendering the claim indefinite.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-17,20,21,24-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohya et al (5,670,231).

Ohya et al discloses the claimed yarn that may be spiral weaved (column 6, line10) with the claimed modified cyanate ester resin (column 2, lines 54-60), within the claimed proportions (abstract).

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1775

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 18-19,22,23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohya et al (5,670,231) in view of Nels (5,842,551) or Winckler (5,662,993) or Watts (4,997,067).

Ohya et al discloses the invention substantially as claimed except for the specifics of the yarn end count.

Nels or Winckler or Watts disclose the claimed yarn count for fiber reinforced resin materials.

Thus it would have been obvious one of ordinary skill in the art to use the claimed yarn count in Ohya et al, as these yarn counts are known to be used in composites to improve performance, as showed by Nels, Winckler or Watts.
